

Bell Bay Pulp Mill Draft Integrated Impact Statement

Erratum 3rd August 2006

Gunns Limited submitted the Bell Bay Pulp Mill Project Draft Integrated Impact Statement (IIS) to the Resource Planning and Development Commission on the 14 July 2006. Subsequent to that date, some minor administrative errors and omissions have been identified with the compilation and content of the Draft IIS. This document provides details of the corresponding corrections. A summary of corrections are shown below.

Table 1 Summary of Corrections

Correction	Topic
Erratum 1	Areas of vegetation potentially lost on the pulp mill site
Erratum 2	Areas of vegetation potentially lost on the effluent pipeline corridor
Erratum 3	Areas of vegetation potentially lost on the effluent pipeline corridor
Erratum 4	Landholder details on the Water Supply Pipeline corridor
Erratum 5	Landholder details on the Effluent Pipeline corridor
Erratum 6	Missing pages 6-389 and 6-390 from Volume 3A
Erratum 7	Missing Figure 9-3 from page 6-238 Volume 3A

Erratum 1. On Page 32 of the Executive Summary, Section 6.2.6.3 details potential loss of vegetation on the pulp mill site. It details potential loss of 2.7 ha of State listed threatened vegetation and 60.1 ha of non-threatened native vegetation communities. These figures should be 3.2 ha and 74.7 ha respectively in line with Section 4.9 of Volume 2A and Appendix 29 (Flora Report).

Erratum 2. On page 34 of the Executive Summary, Section 6.2.6.3 under the heading Effluent Pipeline and Shoreline Crossing, the first dot point lists the potential loss of approximately 17 ha of threatened native vegetation. This figure should be approximately 1 ha.

Erratum 3. On page 187 of Appendix 29 (Flora Report), Section 7.7.1 Flora Impact under *Loss or damage to native vegetation*, construction of the effluent pipeline and outfall area will result in the loss of 0.9 ha of threatened native vegetation, not 16.9 ha as shown. A breakdown of the area (0.9 ha) potentially affected is provided in the subsequent dot points in Section 7.7.1.

Erratum 4. The following table replaces Table 3-1 on page 3-23 of Volume 3A which identifies landholdings along the proposed water supply pipeline.

Table 3-1 Land Ownership – Water Supply Pipeline

Erratum 6. Pages 6-389 and 6-390 from Volume 3A were omitted from the final document. The pages include Section 10.15 relating to Reserves and Protected Areas along the effluent pipeline alignment and Section 10.16 relating to Transport Infrastructure and Traffic Access relating to the effluent pipeline. The following was included on those pages.

10.15 Reserves and Protected Areas

The following sections describe the reserves and protected areas located within the vicinity of the proposed effluent pipeline and outfall.

10.15.1 Tenth Island Nature Reserve

Tenth Island is a small island of approximately 1.24 hectares, which lies off the north coast of Tasmania near George Town. The reserve, gazetted in 1978, covers the entire island (also known as Barrenjoey) to low water mark and is administered under the *Nature Conservation Act 2002*. The island is an elongated sedimentary rock with a central ridge about 10 metres in height. Tenth Island is one of only six sites in Tasmanian waters that are known to support breeding colonies of the Australian Fur Seal (*Arctocephalus pusillus doriferus*). Estimates of the number of seals in the colony range from 500 to 750 and the colony is believed to be stable. This reserve was registered on the Register of the National Estate on 21st October 1980 for the associated conservation values.

10.15.2 George Town Conservation Area

The George Town Conservation Area was gazetted in 1987 under the *Nature Conservation Act 2002* and covers 121 hectares of the Tamar estuary near George Town. It is conserved for its estuarine and water flow values.

10.15.3 Long Reach Private Sanctuary (and Long Reach Conservation Area)

The history and status of the Long Reach Private Sanctuary is set out in section 2.11 of Volume 2.

10.15.4 Public Reserves

The area in the vicinity of the effluent pipeline also contains a number of public reserves. These defined under the *Crown Lands Act 1976* and managed by the Crown in the municipality of George Town. These include:

- ▣ coastal reserves,
- ▣ river reserves,
- ▣ water supply reserves,
- ▣ recreation reserves, and
- ▣ school reserves.

10.15.5 State Forest

Areas of State Forest are also located near to the effluent pipeline in the vicinity of Long Reach adjacent to the Tippogoree Hills Forest Reserve. These areas of Crown Land were gazetted in 1973 under the *Forestry Act 1920* and are now managed under the *Forest Practices Act 1985*, in accordance with the Forest Practices Code and such activities as the Forest Practices Board considers compatible with establishing forest, or growing or harvesting timber.

10.15.6 Forest Reserve

Forest Reserves are areas of forest that were declared Resolved Areas for Protection (RAP) under the Tasmanian RFA and gazetted after 30 June 1996. They are managed by Forestry Tasmania under the *Forest Practices Act 1985*. The largest forest reserves in the vicinity of the effluent pipeline are the Tippogoree Hills Forest Reserve and Den Ranges Forest Reserve.

10.15.7 Private Timber Reserves

Private timber reserves are part of the Private Timber Reserves Program and are managed under the Tasmanian *Forest Practices Act 1985*. As a Private Timber Reserve the land is to be used only for the establishing, or growing or harvesting of timber in accordance with the Forest Practices Code and such activities as the Forest Practices Board considers compatible with establishing forest, or growing or harvesting timber. Private timber reserves are found within the vicinity of the effluent pipeline route near Long Reach and Low Head, these are:

- ☐ State No. 0212, owned by Associated Forest Holdings Pty Ltd at Lefroy (UPI No. 0144, Volume 45095/1);
- ☐ State No. 0363, owned by North Broken Hill Ltd at East Tamar (UPI No. 3115, Volume 31250/1);
- ☐ State No. 0867A, owned by Effingham Pty Ltd at Effingham (Low Head) (UPI No. 3580 and 3581, Volume 4651/64 and 4651/67);
- ☐ State No. 0867B, owned by Effingham Pty Ltd at Effingham (Low Head) (UPI No. 0180, Volume 4595/7);
- ☐ State No. 0867C, owned by Effingham Pty Ltd at Effingham (Low Head) (UPI No. 3578, Volume 104542/1); and
- ☐ State No. 0614, owned by Archer, L.D. and Effingham at Low Head (UPI No. 0176, 3598 and 3599, Volume 114506/1).

10.15.8 Other Protected Areas

Tamar River Shark Refuge

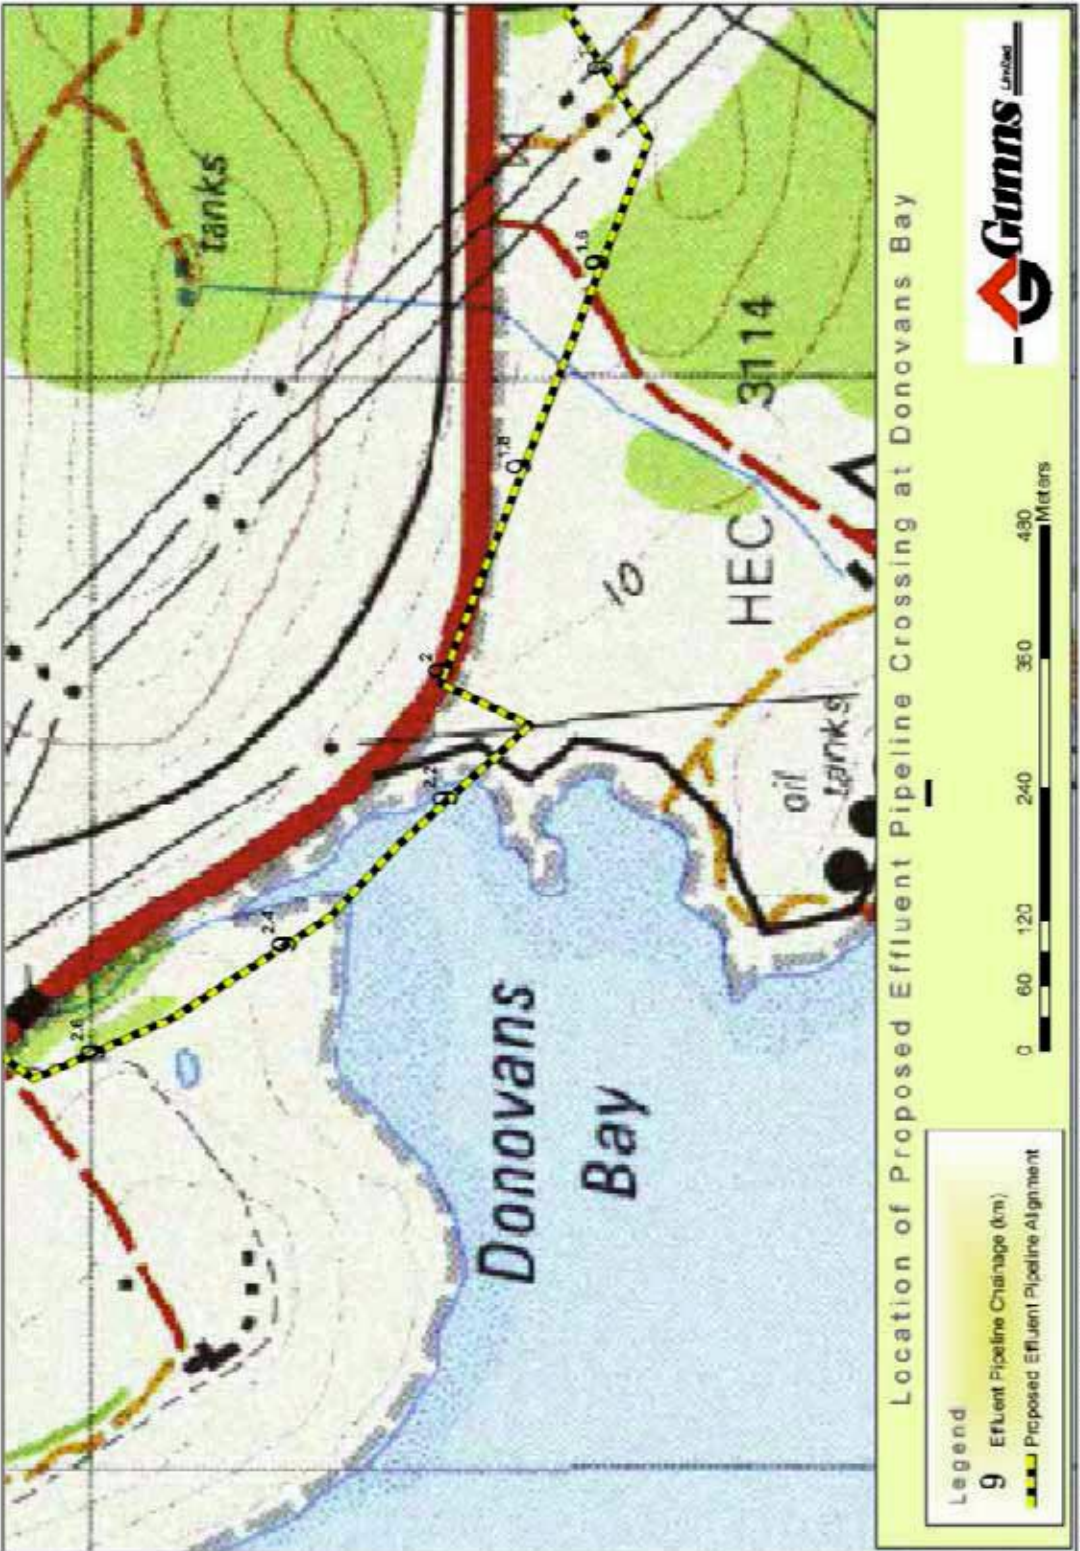

The Tamar River, from a line between Low Head and West Head in the north to the end of estuary at Launceston (see map below), is a shark refuge under the *Living Marine Resources Management Act 1995*, the Scalefish Fishery Policy Document (1998) and the Scalefish Fishery Management Plan (2004). There are restrictions on commercial and recreational fishing in areas designated as shark refuges.

10.16 Transport Infrastructure, Traffic and Access

Transport infrastructure, traffic and access have been discussed in detail in Section 2.12, Volume 2 of the Draft IIS.

The effluent pipeline will generally follow the East Tamar Highway north from the pulp mill site to George Town, where it will follow the non established and established road reserves to Low Head and Four Mile Beach.

Erratum 7. Figure 9-3 Donovans Bay Crossing was omitted from page 6-238 Volume 3A. This figure is provided on the following page.

Gunns Limited. Representation Only
