Dear Peter,

Re: Analysis of pulp and paper mill effluent

Please find attached the corrected results from testing of the pulp mill effluent sample (NMI reference sample number NQ09/05763/N) ex South America which was received at these laboratories on 26 November 2009 and first reported to you 3 December 2009.

This latest report differs from the earlier one in that the following have been included:

1. The results for linoleic acid,
2. Units in the second table, and
3. The spreadsheet has been dated

Yours faithfully
